# Hepatitis experienced

## Experienced hepatitis

- Yes (N=169)
- No (N=455)
- Not known (N=20)

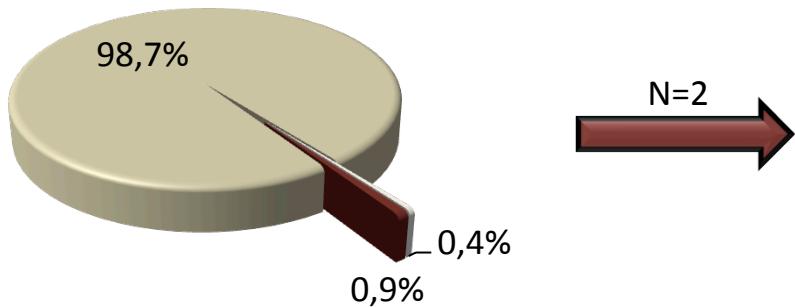

Data from last annual report of each person.

Type of hepatitis not specified in 5 persons. One person may have recorded more types of hepatitis.

# Hepatitis experienced

## Experienced hepatitis

- Yes (N=2)
- No (N=230)
- Not known (N=1)

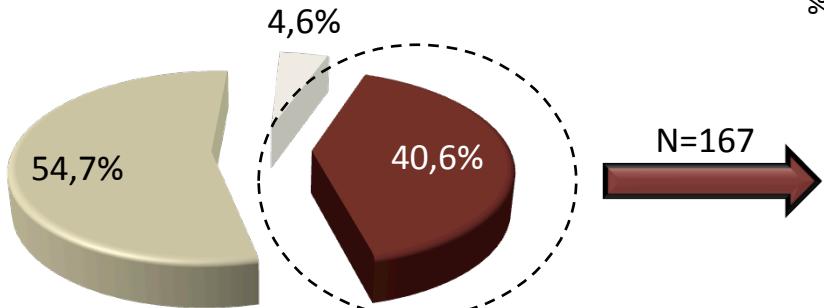

*One child has hepatitis C, type of hepatitis not specified in one child.*

*Data from last annual report of each person.*

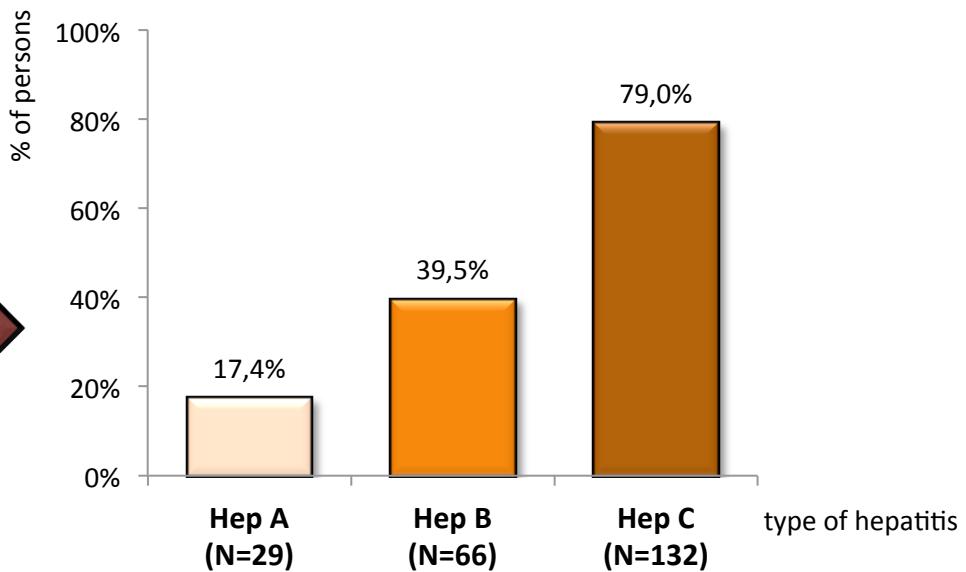

# Hepatitis experienced

## Experienced hepatitis

- Yes (N=167)
- No (N=225)
- Not known (N=19)

N=167 →

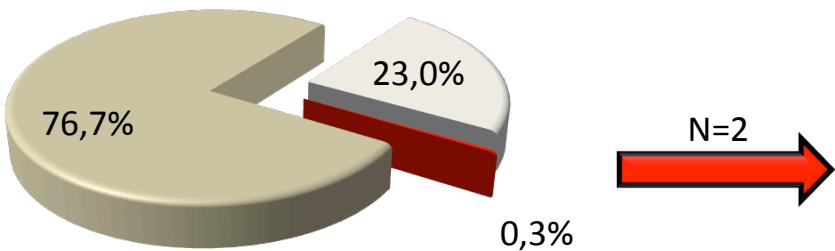

Data from last annual report of each person.

Type of hepatitis not specified in 3 adults. One person may have recorded more types of hepatitis.

# HIV

## HIV

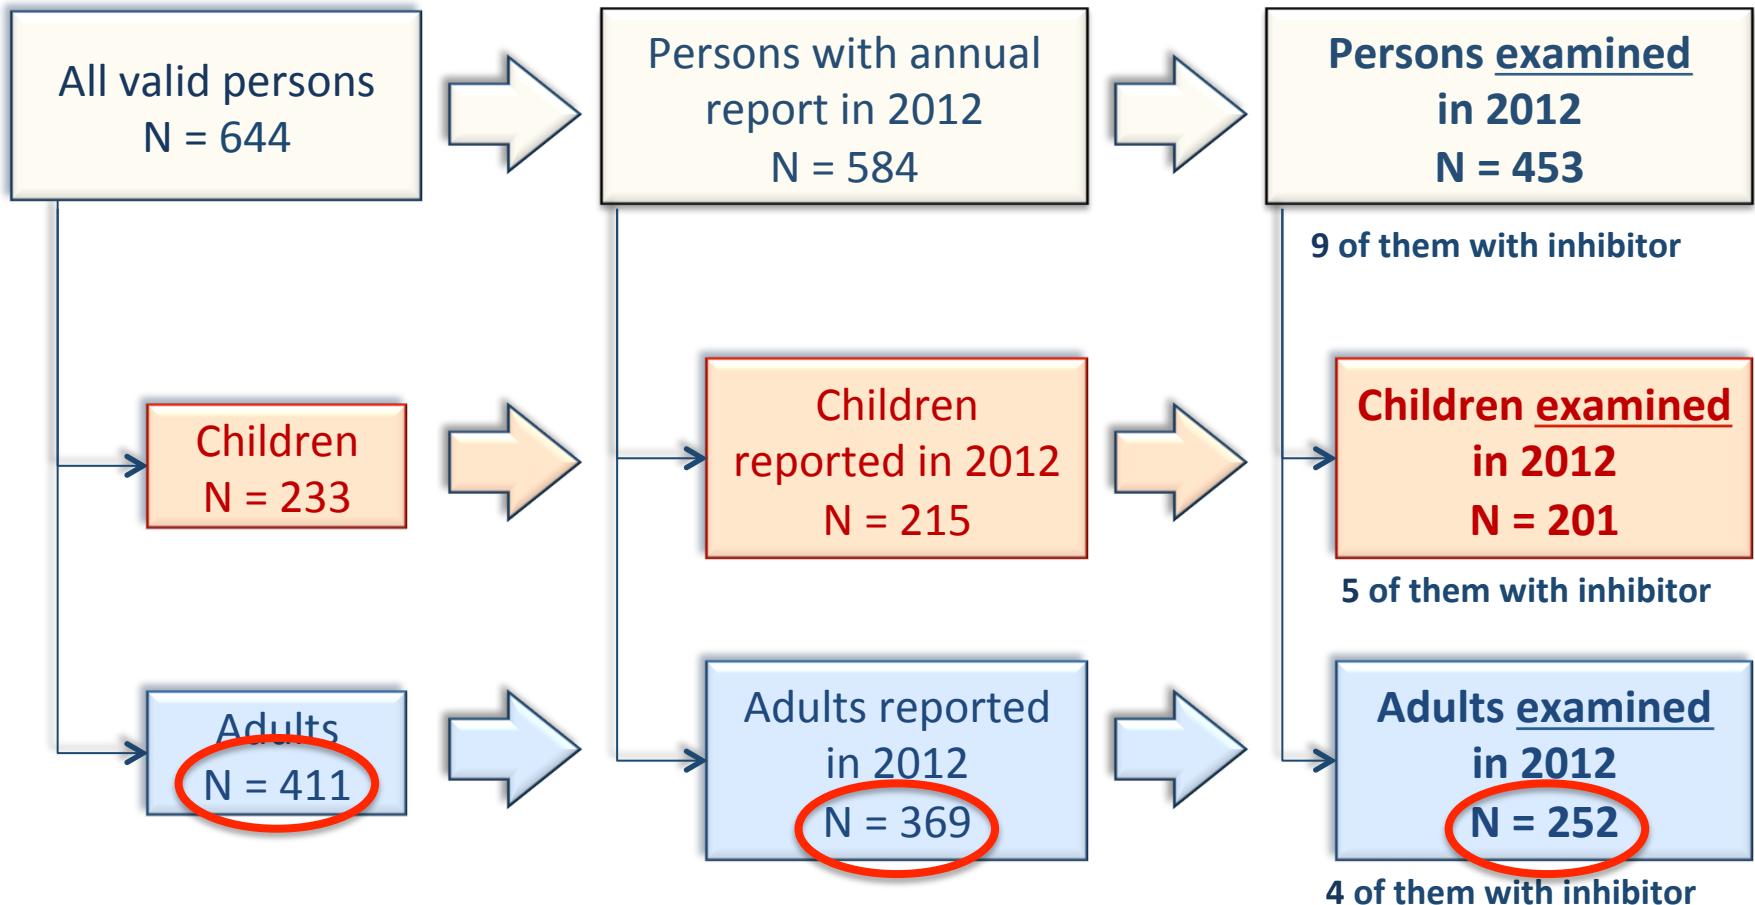

- Positive (N=2)
- Negative (N=494)
- Not known / not available (N=148)

*Both HIV-positive persons are adults.*

*Data from last annual report of each person.*

# Data from year 2012 – sample size

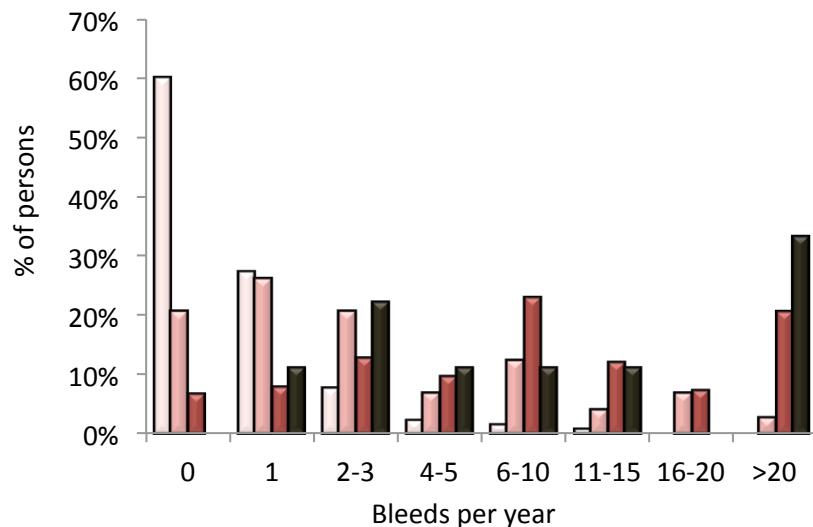

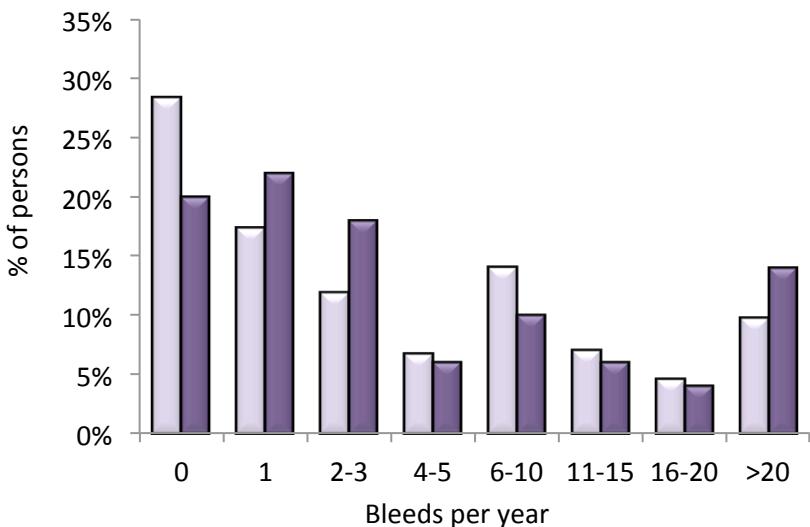

# Persons with haemophilia with inhibitor

- inhibitor was recorded in 8 persons in year 2012
- other 1 person has recorded inhibitor in 2011 (data from 2012 are not available)

**currently 9 persons with inhibitor  
(5 children and 4 adults) + 6 in other centre**

# Frequency of bleeding requiring treatment in 2012

\* without inhibitor

<sup>t</sup> mean and median of frequency of bleeding in adults with severe haemophilia without inhibitor on permanent prophylaxis

Frequency of bleeding is missing in 188 adults.

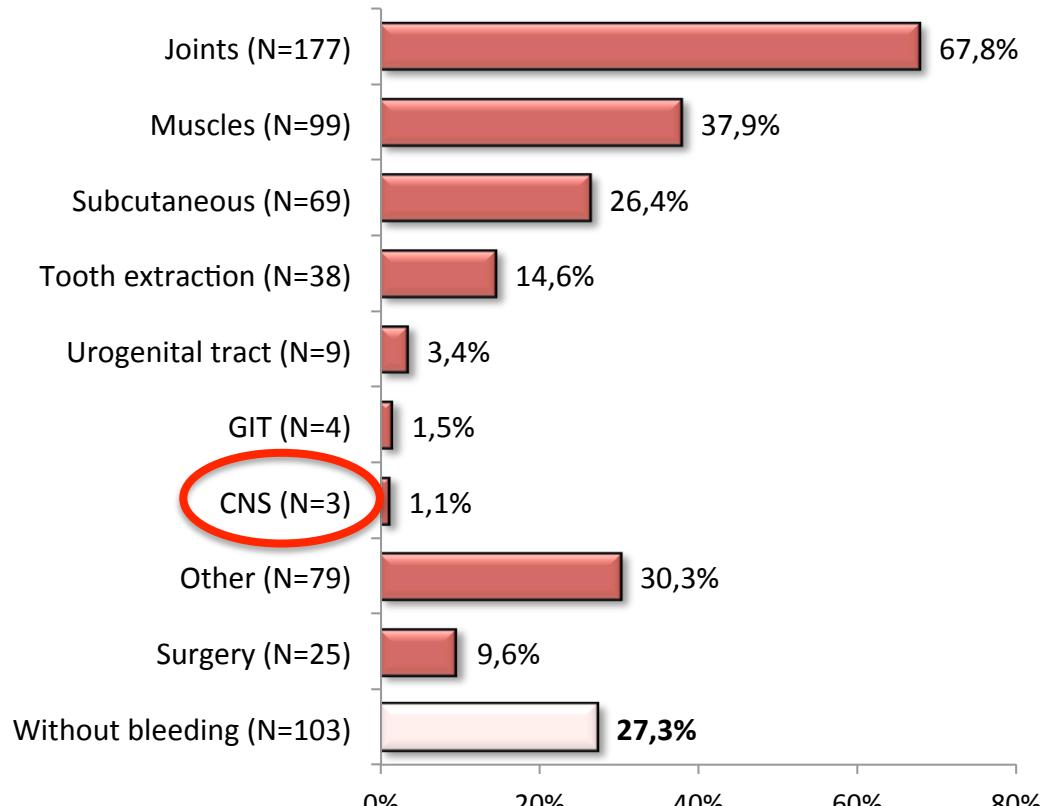

# Location of (any) bleeds in 2012

274 (72.7%) persons experienced bleeding requiring treatment at least once in year; 2849 bleeds were recorded in total, 78 bleeds required hospitalization.

103 (27.3%) persons recorded no bleed during year 2012.

Information on frequency of bleeding is missing in 76 examined persons.

Overall 261 persons have recorded location of any bleeds\*.

\* all recorded bleeds, regardless of requirement of treatment

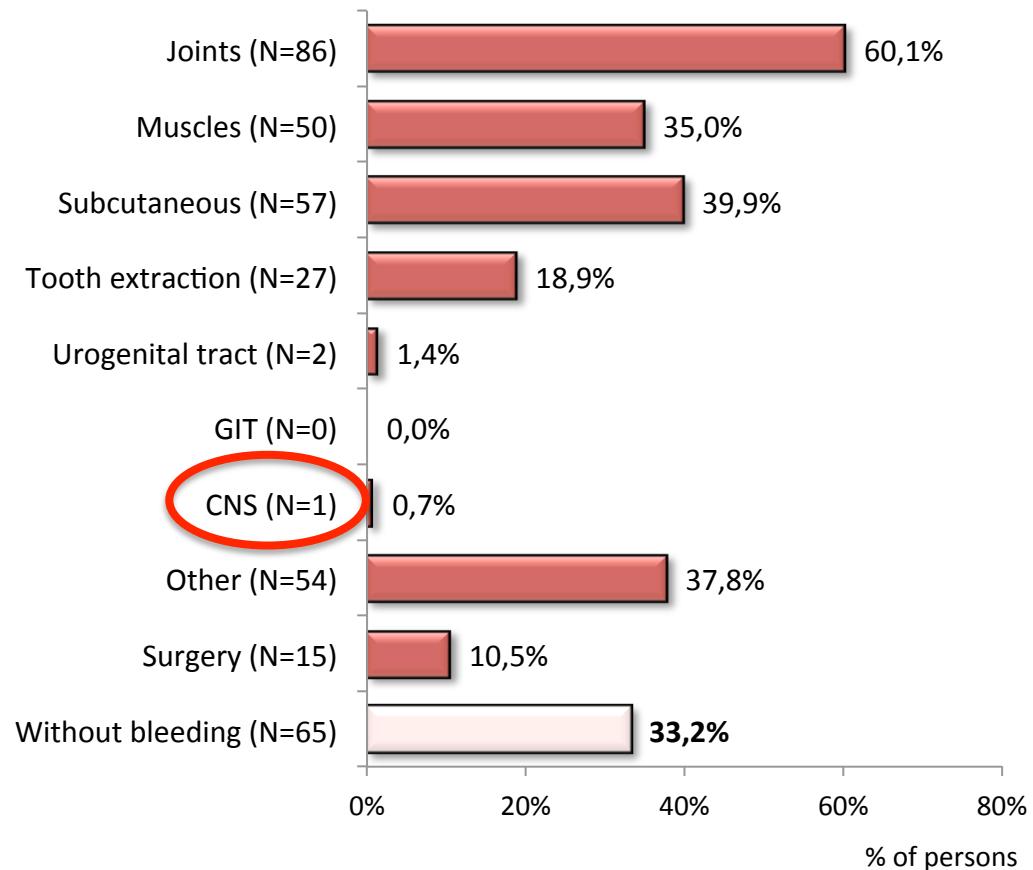

# Location of (any) bleeds in 2012

131 (66.8%) children experienced bleeding requiring treatment at least once in year; 840 bleeds were recorded in total, 50 bleeds required hospitalization.

65 (33.2%) children recorded no bleed during year 2012.

Information on frequency of bleeding is missing in 5 examined children.

Overall 143 persons have recorded location of any bleeds\*.

\* all recorded bleeds, regardless of requirement of treatment

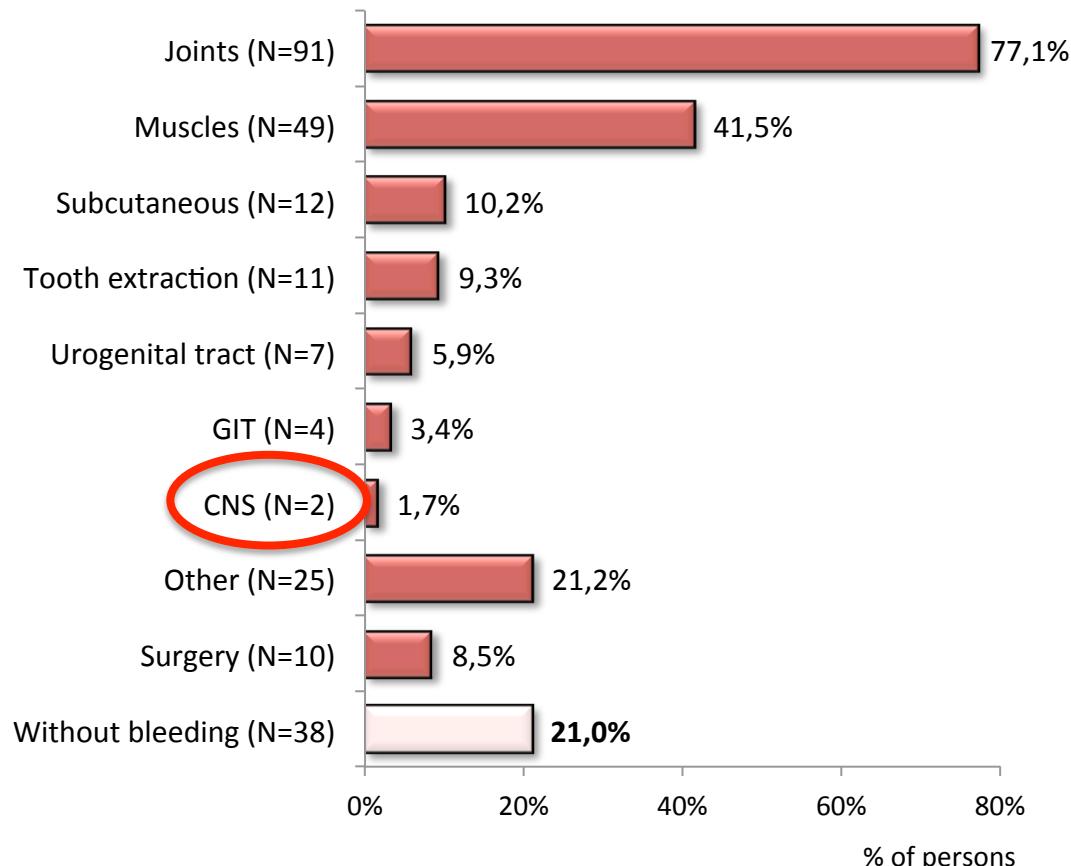

# Location of (any) bleeds in 2012

143 (79%) adults experienced bleeding requiring treatment at least once in year; 2009 bleeds were recorded in total, 28 bleeds required hospitalization.

38 (21%) adults have recorded no bleed during year 2012.

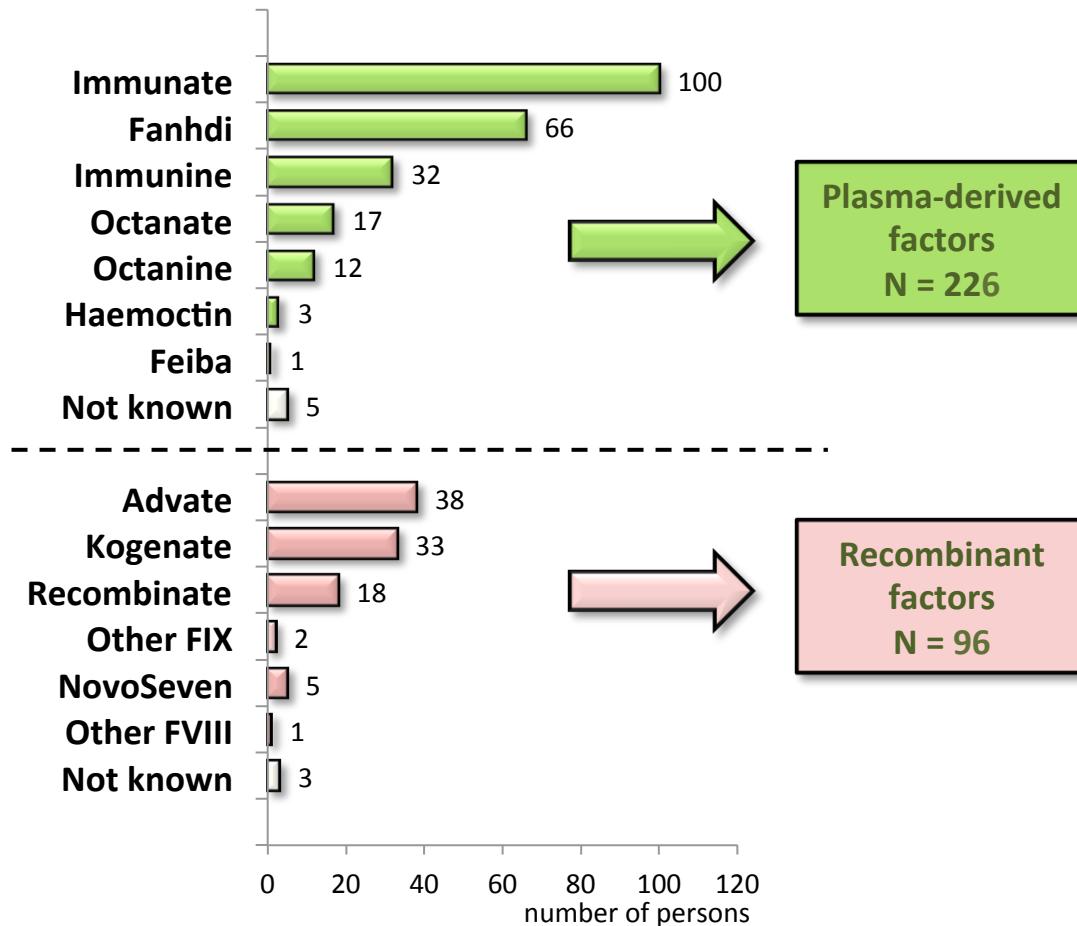

Information on frequency of bleeding is missing in 71 examined adults.

Overall 118 persons have recorded location of any bleeds\*.

\* all recorded bleeds, regardless of requirement of treatment

# Treatment

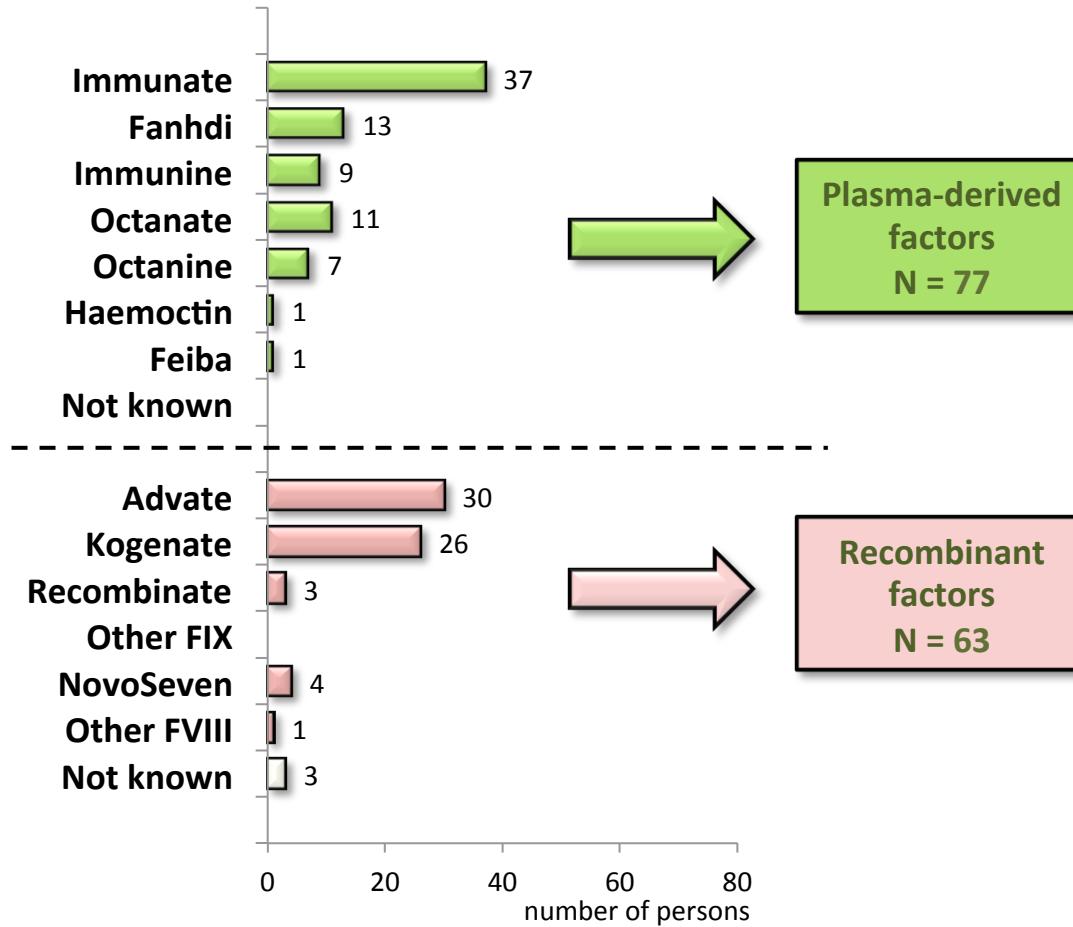

312 (68.9%) persons received drugs in 2012 (20 of them more different drugs).

Plasma-derived factors were administered more frequently – in 226 (50%) persons, whereas recombinant factors in 96 (21.2%) persons.

Ten persons were treated with both plasma-derived and recombinant factor.

# Treatment

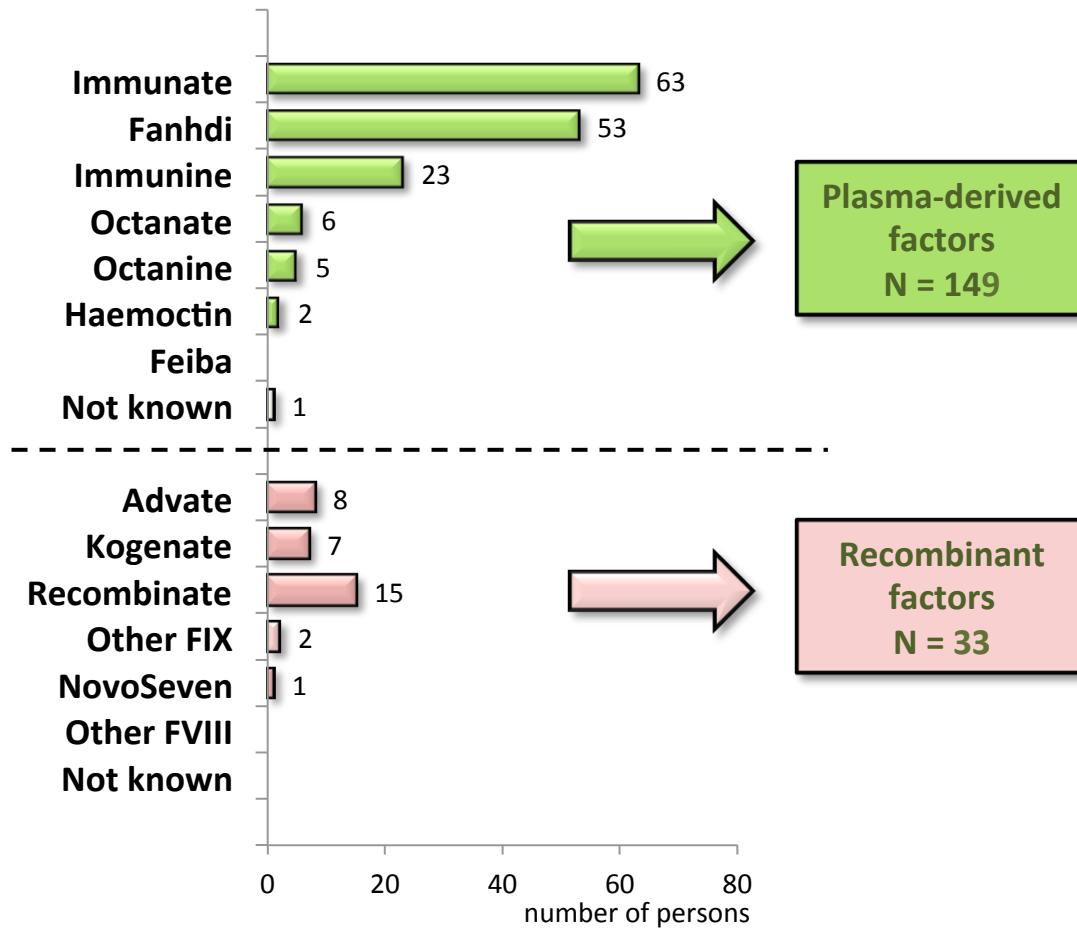

135 (67.2%) children received drugs in 2012 (11 of them more different drugs).

Plasma-derived factors were administered in 77 (38.3%) children, recombinant factors in 63 (31.3%).

Five children were treated with both plasma-derived and recombinant factor.

# Treatment

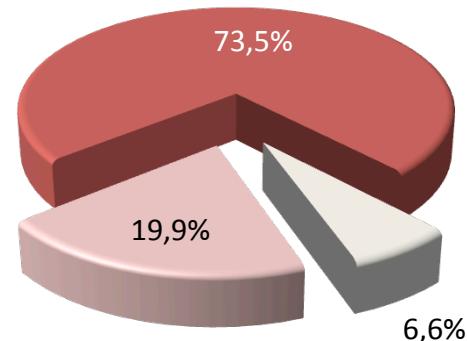

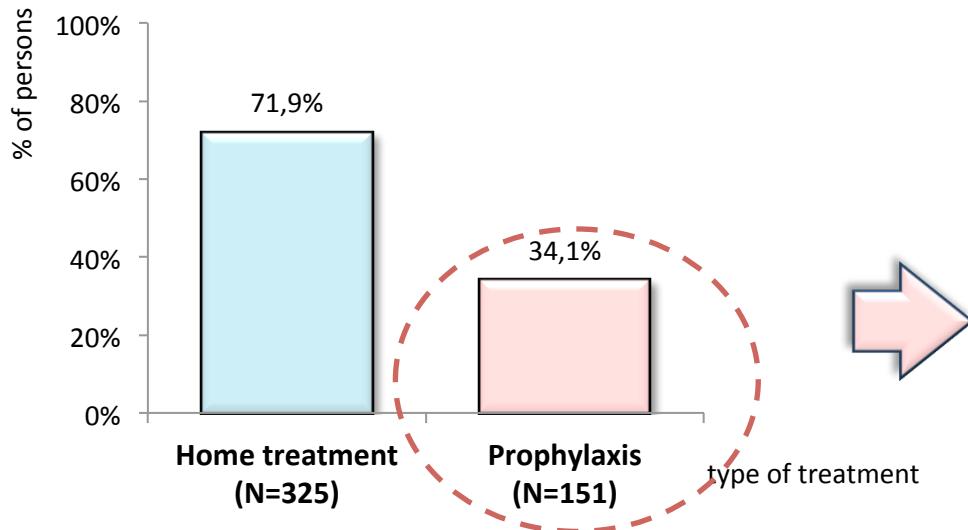

177 (70.2%) adults received drugs in 2012 (9 of them more different drugs). Plasma-derived factors were administered more frequently – in 149 (59.1%) adults, whereas recombinant factors in 33 (13.1%) adults. Five adults were treated with both plasma-derived and recombinant factor.

# Comparison of treatment in years 2011 and 2012

|                          |                            | Treatment in 2012               |                       |                    |                    |                   |       |
